PITCH

HARD-DOMAIN LEARNING

WHERE EXPERTS ARE SCARCE

OCT 2026

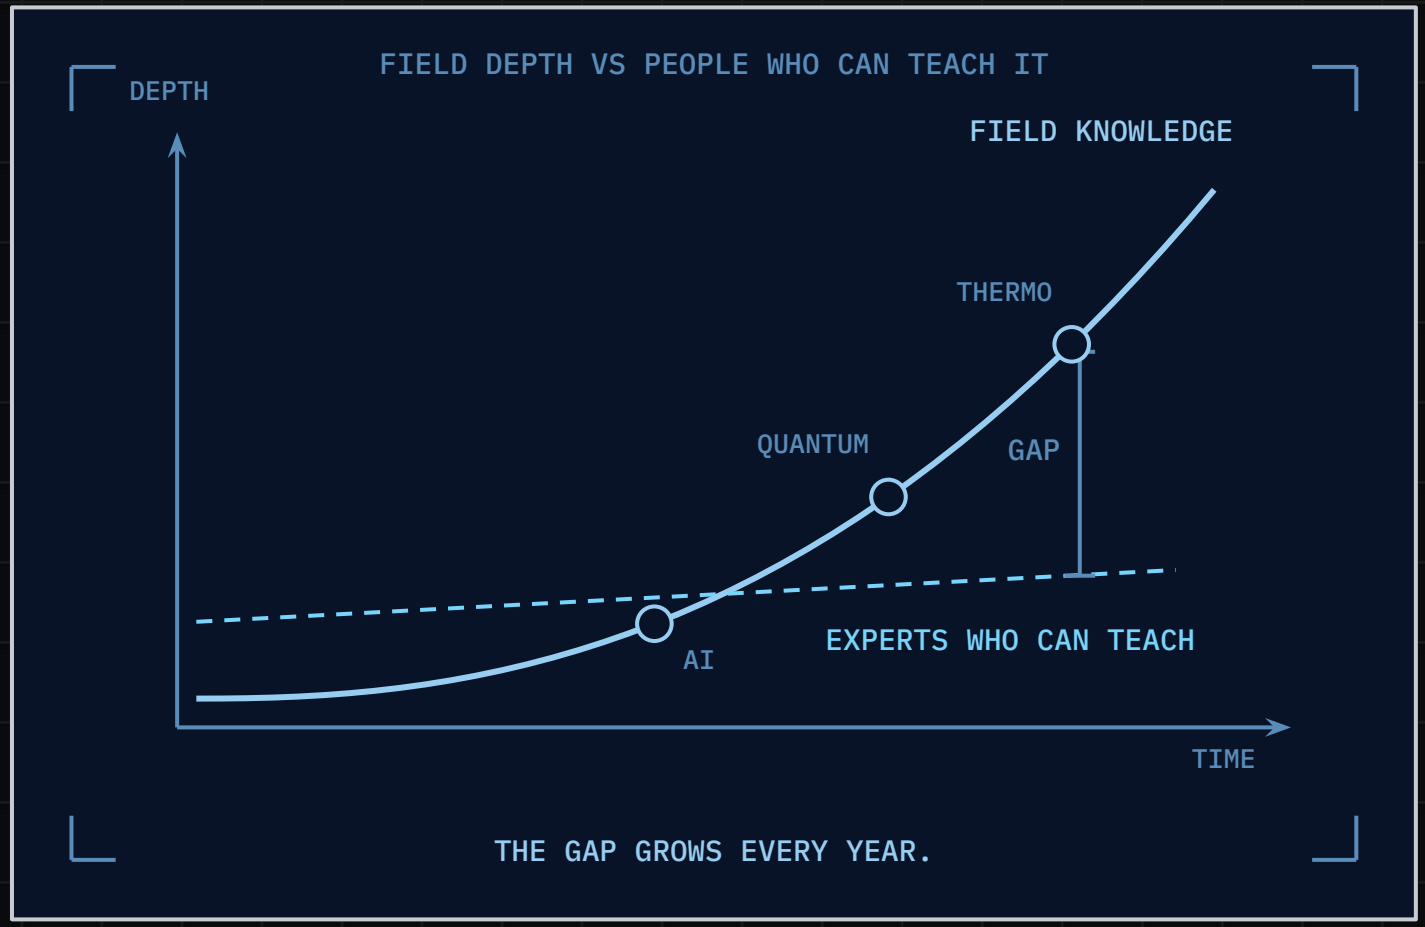

01 // THE PROBLEM

FRONTIER FIELDS OUTRUN THEIR TEACHERS

01 Quantum, thermo and AI outpace the people who can teach them

02 A CV cannot prove a hard skill

03 Generic courses and test banks miss what a team needs

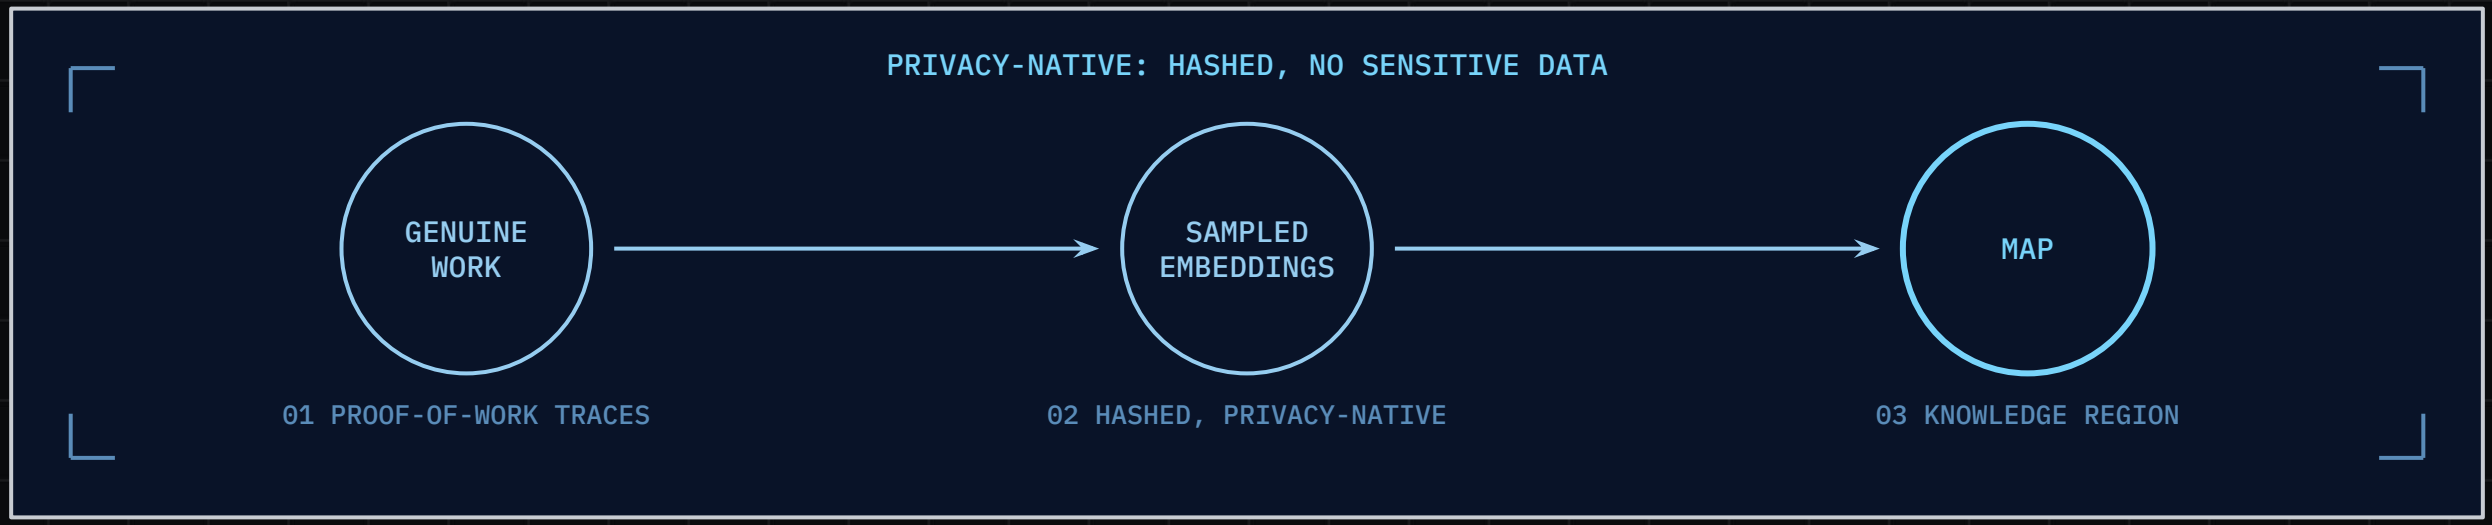

HARD SKILLS ARE SCARCE AND HARD TO VERIFY.

02 // THE IDEA

KNOWLEDGE REGIONS

A proof-of-work embeddings model encodes traces of genuine work on the platform. Sampling many traces defines the regions that matter. Hashed, so no sensitive data leaves the company. The region stays your IP.

ONE MAP DRIVES THE LEARNING AND THE PROOF.

01 // LEARN

LEARNING HARNESS

A harness designed to help you learn in the age of AI. It steers your learning process so you can use tools like AI to outsource certain parts of the work without accidentally outsourcing the learning itself.

UNCERTAIN.SYSTEMS/LEARNING-HARNESS

02 // VERIFY

KNOWLEDGE VERIFICATION

Verify human knowledge without traditional tests and exams. Results cannot be cheated or faked: uncheatable proof from genuine work.

UNCERTAIN.SYSTEMS/KNOWLEDGE-VERIFICATION

03 // MAP

KNOWLEDGE MAPPING

A Knowledge Mapping product for science use cases: knowledge regions as a living map of a domain (proximity, coverage, and the path through what is held) rather than a verification exam.

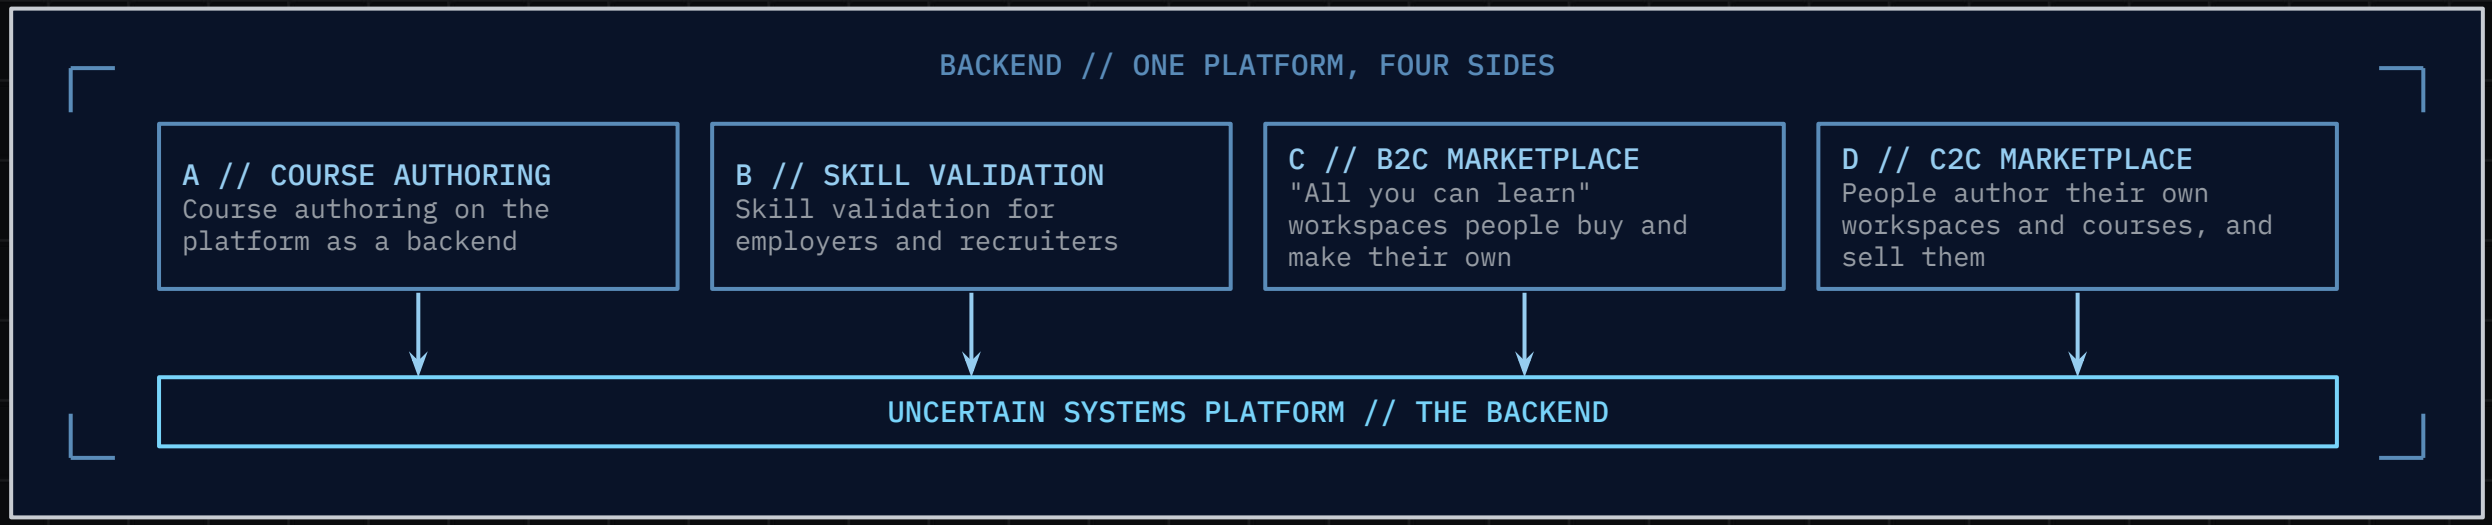

UNCERTAIN.SYSTEMS/KNOWLEDGE-MAPPING

LEARNING HARNESS. KNOWLEDGE VERIFICATION. KNOWLEDGE MAPPING.

03 // BUSINESS SIDES

PRODUCT + BUSINESS SIDES

One platform, used as the backend for four sides of the business: two serve organisations, two are marketplaces for people.

ONE BACKEND. FOUR WAYS TO SELL IT.

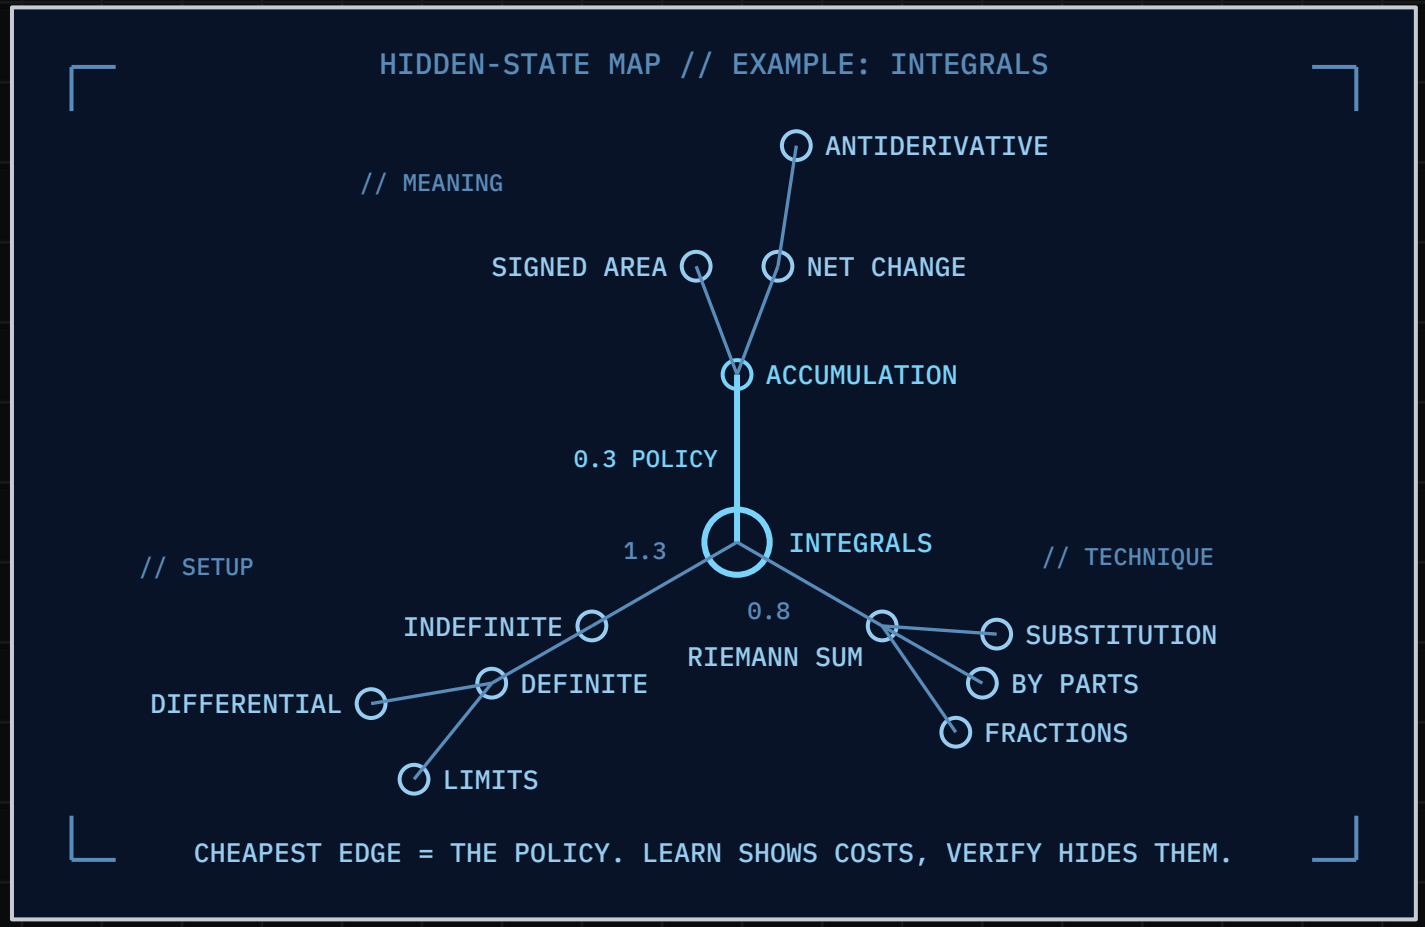

04 // UNDER THE HOOD

FREE ENERGY PRINCIPLE

01 We simulate the topic as a map of hidden states, and how someone would explore it (active inference, epistemic foraging).

02 Your proof of work is mapped onto it as you go: what you say, write and draw.

03 No content feed, no Q&A drill. It shows the next step that most reduces your uncertainty.

NOT CONTENT OR Q&A. A MAP THAT SHRINKS UNCERTAINTY.

05 // TRACTION

OUR FIRST CUSTOMERS AND PARTNERS

01

FIRST CUSTOMER

The WISER (thewiser.org)

2

COURSES AUTHORED

Authored for The WISER

~$20K

FULL UNIT

Now being authored

PARTNER TRACK // PROVEN VALIDATION

STATUS: IN PROGRESS

PROVEN VALIDATION // SOFT SKILLS

+

UNCERTAIN SYSTEMS // HARD SKILLS

Co-founded by John Kerr,
one of the fathers of Agile

TOGETHER: HARD-SKILL VALIDATION
IN THEIR PORTFOLIO.

REPEAT BUYER: FROM 2 COURSES TO A FULL UNIT.

05 // TRACTION: COMMUNITY

BUILDING THE COMMUNITY AROUND FRONTIER TOPICS

TIMELINE // COMMUNITY EVENTS: DONE -> NEXT

ETH ZURICH

First Extropic thermocomputing hackathon in Europe

THERMOSYNTHESIS

Gray's Inn London, 3 days, ~£30K budget

TOP PEOPLE IN THE FIELD. VENUE CONTRACTED, DEPOSIT PAID.

06 // BUSINESS MODEL

HOW WE GET PAID

Roadmap: experts author their own workspaces and sell access. They define the map and how it is explored, with their own taste. A recreational-learning marketplace that monetizes knowledge maps.

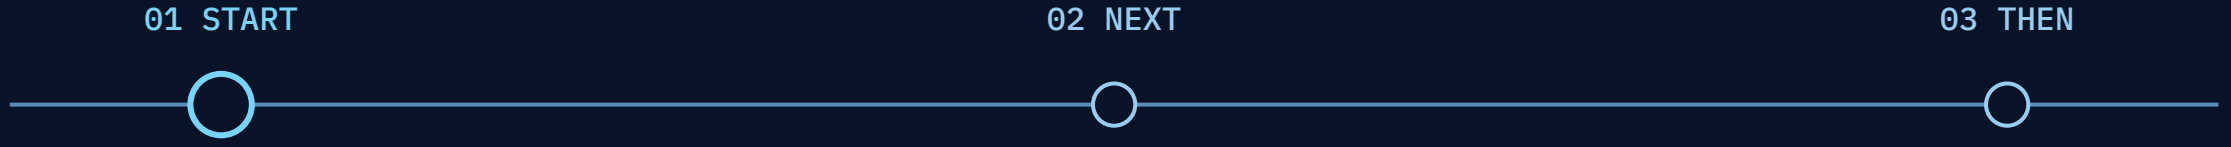

STREAM	BUYER	PRICING
Course authoring	Education programs, frontier-tech companies	~$20K per full unit (WISER)
Academy K tracks	Learners in quantum, AI / SI, thermo	$49 per student / cohort
Skill validation	Employers and recruiters	$10 Platform usage / Per flow
Marketplace (roadmap)	Experts sell access to their own workspaces	Revenue share - TBD

PAID TODAY: COURSE AUTHORING. [REVENUE TO DATE]

06 // GO-TO-MARKET

START WITH FRONTIER COMMUNITIES

GO-TO-MARKET // COMMUNITIES -> PROGRAMS -> COMPANIES

FRONTIER TOPIC COMMUNITIES

Thermodynamic + quantum computing

EDUCATIONAL PROGRAMS

Universities + institutions in frontier tech (AI / SI and other frontier topics)

FRONTIER TECH COMPANIES

Education + upskilling teams, plus internal recruiting teams

COMMUNITIES FIRST. THEN PROGRAMS. THEN COMPANIES.

07 // FOUNDER

DANIEL COLOMER
SOLO FOUNDER

01 Computer science background: software engineer (UPC), modeling research

02 YouTube "Quantum Intuition" since 2019: live learning sessions

03 Quantum education material with Strangeworks and TheWiser.org

RECOGNITION // ON X // AUGUST 2025

"Winner: I most enjoyed this one from @uncertainsys - OmegaQuest. He's solving Humanity's Last Exam problems with heavy AI use in the loop on video. [...] I love the tenacity on display in working out something hard and seeing how far you can get with AI.

ANDREJ KARPATHY @KARPATHY

Picked Uncertain Systems, presented as OmegaQuest, as the winner of his challenge

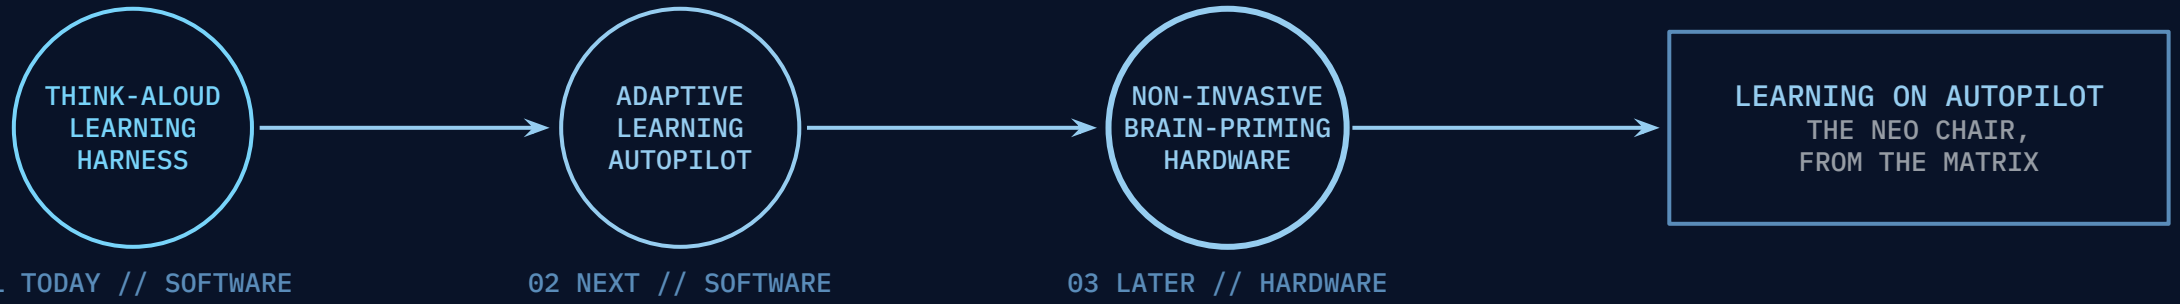

SOLO FOUNDER. RECOGNIZED BY ANDREJ KARPATHY.

07 // VISION

LEARNING ON AUTOPILOT

The end goal: technology, and later hardware, that puts human learning on autopilot. V1 is pure software. Our grounding is neuroscience such as the think-aloud protocol: thinking out loud raises baseline attention, so people learn faster without spending more energy.

ROADMAP // SOFTWARE FIRST, THEN NON-INVASIVE HARDWARE

TODAY SOFTWARE. NEXT NON-INVASIVE HARDWARE.
