01 // THE PROBLEM

FRONTIER FIELDS OUTRUN THEIR TEACHERS

01 Quantum, thermo and AI outpace the people who can teach them

02 Globally: frontier tech moves at different speeds; the US-Europe gap is visible.

03 In a company: skill needs outgrow the team; growing people is slow, hiring is hard.

HARD SKILLS ARE SCARCE AND HARD TO VERIFY.

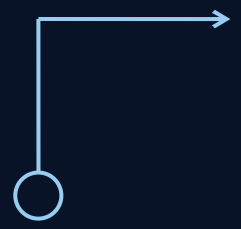

02 // AUTOPILOT

AUTOPILOT

01 AI tutors are the GPS of learning: tailored routes and guidance throughout the journey.

02 We are building the autopilot.

GPS VS AUTOPILOT

GPS // AI TUTORS

01 Tailored routes to where you want to go

02 Guidance throughout the journey

03 You still do the driving

EXAMPLE // LLM chat tutors that explain, quiz and answer on demand: helpful, but not ideal.

AUTOPILOT // WHAT WE BUILD

01 Make learning markers like attention, more energy efficient

02 Neuroscience: think-aloud and brain-priming protocols

03 Plasticity + knowledge induction

THE DIFFERENCE // Not more answers: protocols and mechanisms that change how you learn.

AI TUTORS ARE THE GPS. WE BUILD THE AUTOPILOT.

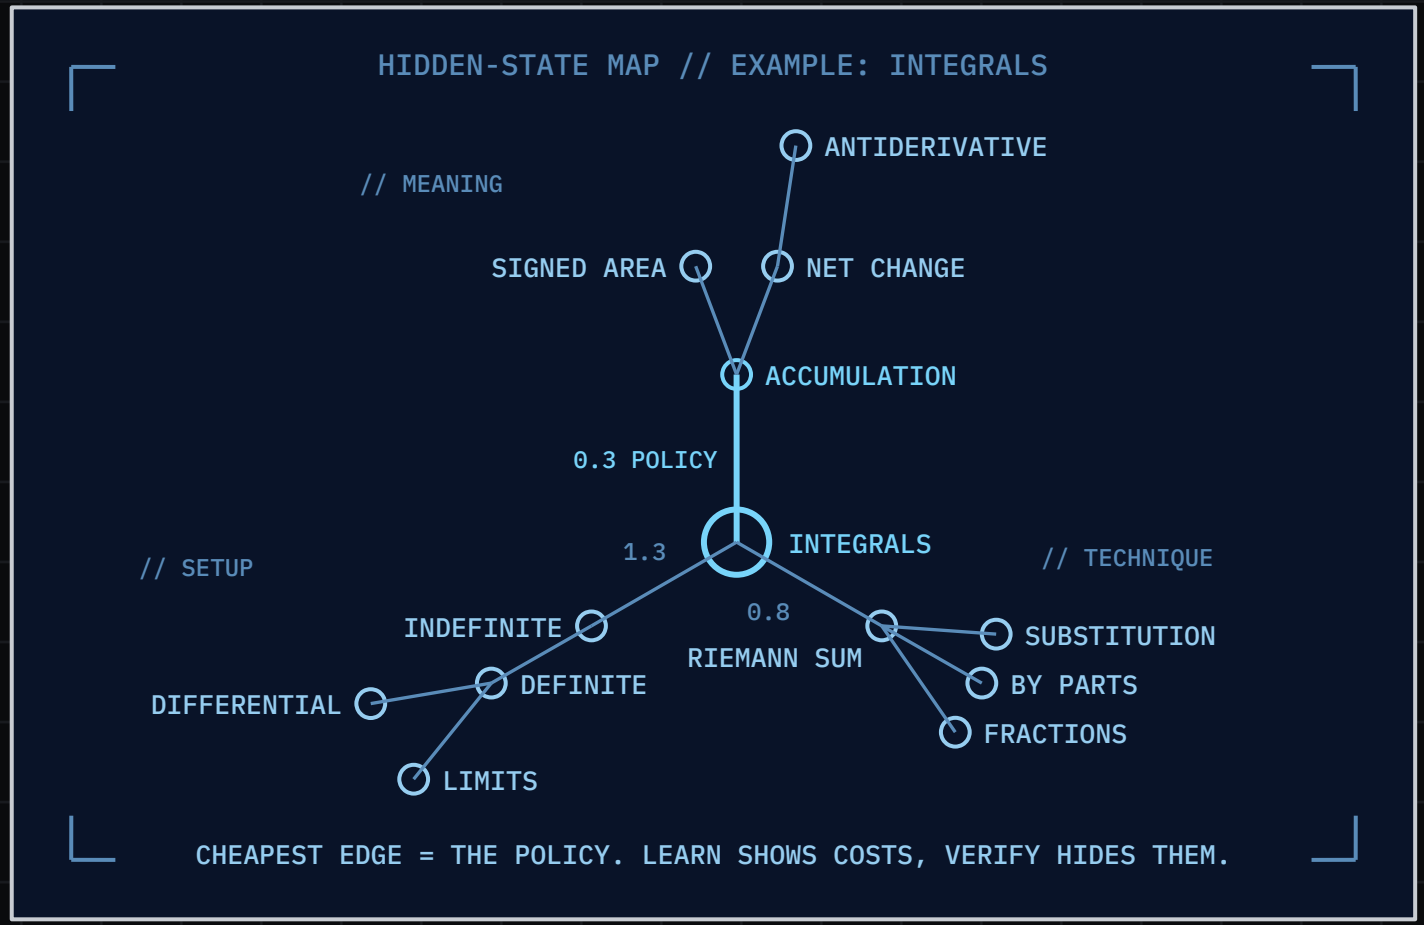

03 // UNDER THE HOOD

FREE ENERGY PRINCIPLE

01 We simulate the topic as a map of hidden states, and how someone would explore it (active inference, epistemic foraging).

02 Your proof of work is mapped onto it as you go: what you say, write and draw.

03 No content feed, no Q&A drill. It shows the next step that most reduces your uncertainty.

NOT CONTENT OR Q&A. A MAP THAT SHRINKS UNCERTAINTY.

04 // KNOWLEDGE EMBEDDINGS

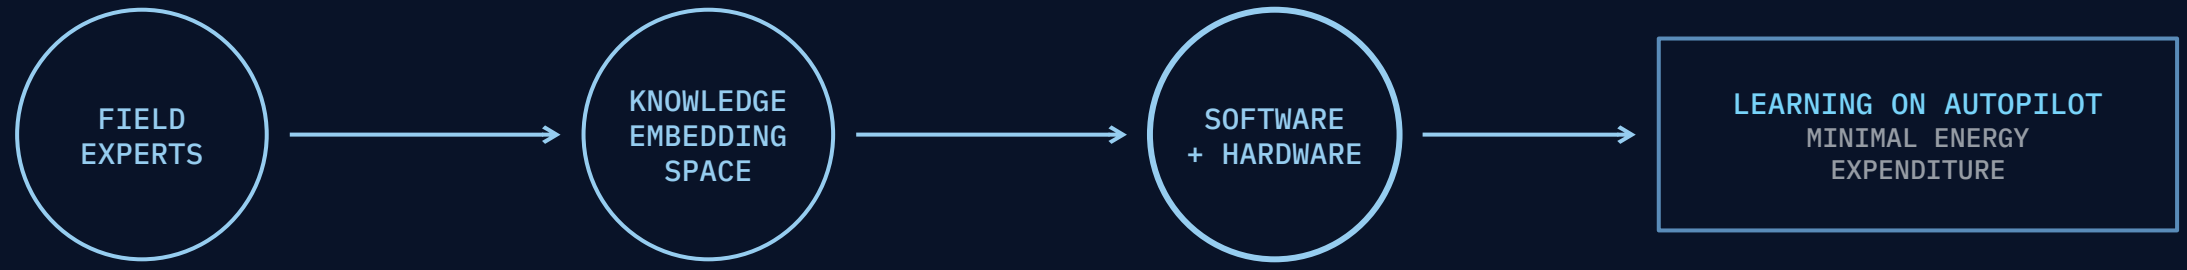

THE ENGINE

01 We take the experts in the fields.

02 We embed their knowledge in a knowledge embedding space.

03 We develop software and hardware that uses that space to help us put learning on autopilot.

PRIVACY-NATIVE: TRACES SAMPLED + HASHED. NO SENSITIVE DATA LEAVES THE COMPANY. THE REGION STAYS YOUR IP.

ONE EMBEDDING SPACE DRIVES THE LEARNING AND THE PROOF.

05 // GO-TO-MARKET

START WITH FRONTIER COMMUNITIES

WHY COMMUNITIES // DESIGNED FOR EXPERT DATA

THIS GTM IS BUILT TO REACH EXPERT DATA.

Frontier experts are scarce and already have a job. They won't take low-prestige, low-paid AI tutor or data-collection gigs.

So we reach them through communities they already belong to and care about.

STAGE 1 // COMMUNITY SEQUENCE: THERMODYNAMICS -> QUANTUM -> TBD

01 FIRST // RUNNING

THERMODYNAMIC COMPUTING

ETH Zurich pilot: 40+ people, $3K+ Extropic prizes. London, 26-28 Feb 2027: 100+ target, incl. a thermodynamics school day we power.

02 NEXT // 2027

QUANTUM COMPUTING

Kickoff event in 2027, focused on the quantum industry.

03 THEN // TBD

BIOLOGY / NATURAL SCIENCES

Still open: probably biology or other natural sciences.

COMMUNITIES FIRST. THEN PROGRAMS. THEN COMPANIES.

06 // TRACTION
