UNCERTAIN SYSTEMS

VERIFY THE WORK, NOT THE ANSWER.

Skill verification for frontier tech and STEM.

01 // THE PROBLEM

OUTCOMES CAN'T VERIFY PEOPLE ANYMORE

94%

AI ON ASSESSED WORK

UK undergrads using GenAI on assessed work. HEPI 2026

26%

AI TEXT CAUGHT

OpenAI's own detector, 9% false flags. Withdrawn 2023

~61%

HUMANS FLAGGED

Non-native TOEFL essays marked as AI. Liang 2023

DETECTORS // UNRELIABLE BY DESIGN

STUDY: WEBER-WULFF ET AL. 2023

14 DETECTION TOOLS // NONE RELIABLE

+

EU AI ACT: HIGH-RISK, 2 DEC 2027

Annex III: AI used in hiring and in evaluating learning outcomes.

A DETECTOR SCORES THE TEXT,
not who did the thinking.

EVIDENCE MUST COME FROM HOW PEOPLE WORK, NOT THE ANSWER.

AI WRITES THE ANSWERS. DETECTORS CAN'T TELL WHO DID THE WORK.

02 // THE SOLUTION

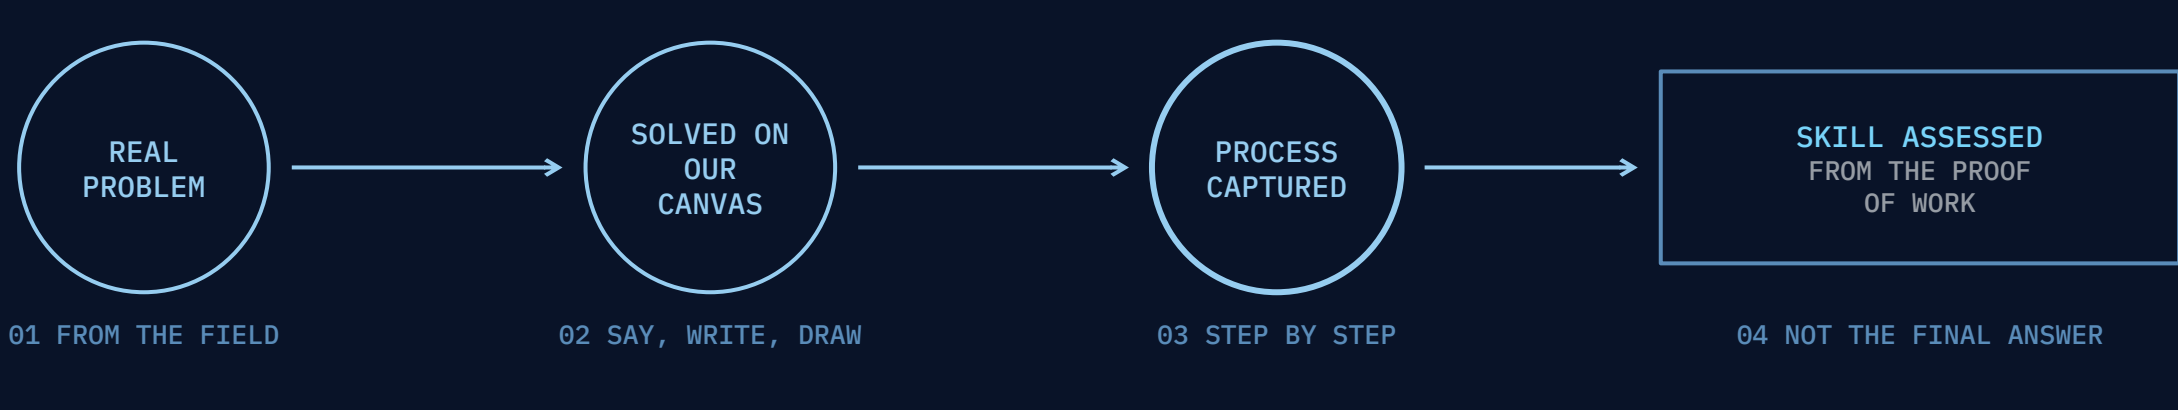

VERIFY THE PROOF OF WORK

01 We set a real problem from the field, not a quiz.

02 They solve it on our canvas: speaking, writing, drawing.

03 Each step is captured as they go: the proof of work.

04 We assess skill from how they worked, not the final answer.

AI CAN WRITE THE ANSWER. THE PROOF OF WORK SHOWS THE THINKING.

03 // KNOWLEDGE EMBEDDINGS

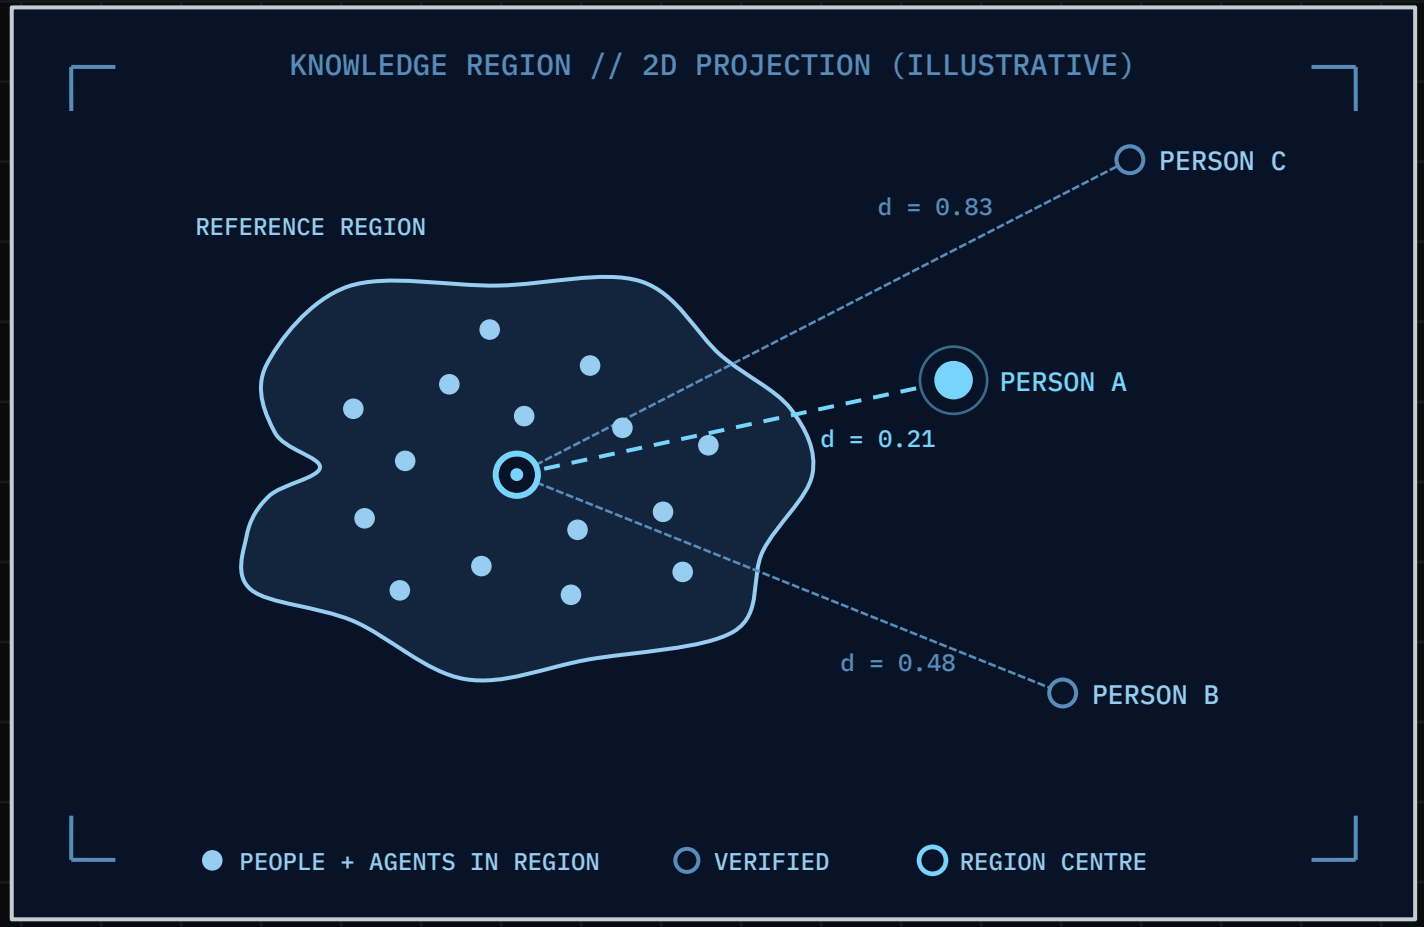

KNOWLEDGE REGIONS

01 Work by people and agents is embedded in a knowledge-embeddings space.

02 Over time, clusters form: people and agents who think and solve problems in similar ways.

03 A region is seeded by simulating exploration strategies; real sessions sit alongside.

04 We verify by comparing someone's proof of work to that region.

A REFERENCE REGION IS THE FRAME FOR VERIFYING PROOF OF WORK.

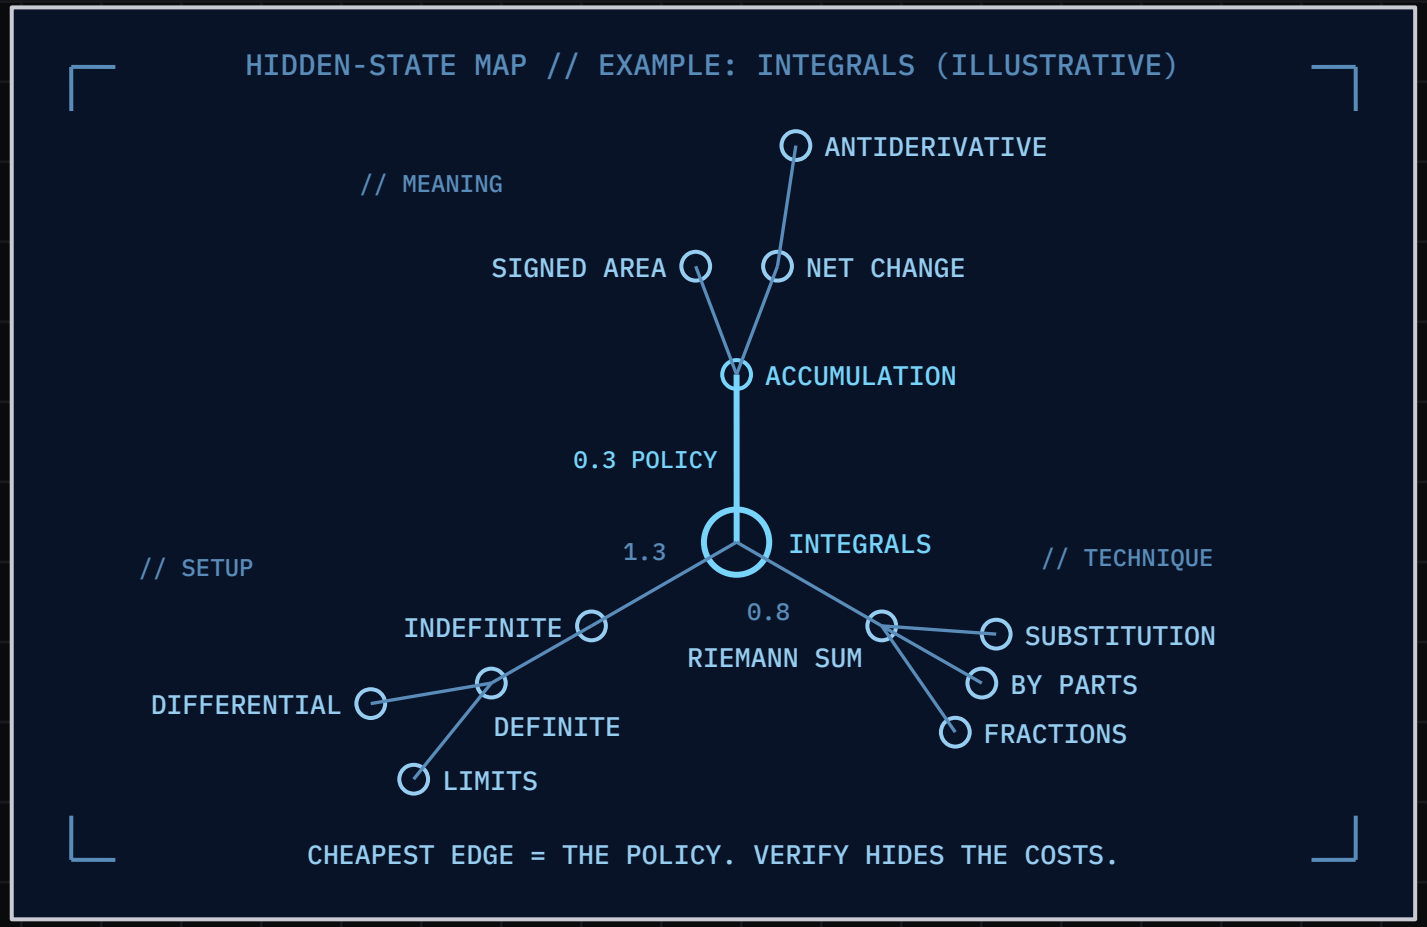

04 // THE SCIENCE

FREE ENERGY PRINCIPLE

01 We model the problem as a map of hidden states and how someone could explore it (active inference, epistemic foraging).

02 Their proof of work is mapped onto it as they go: what they say, write and draw.

03 Verify records how far their path is from the cheapest one. It is not a detector.

WE CHECK HOW THE PROBLEM WAS EXPLORED, NOT WHAT WAS SUBMITTED.

05 // TRACTION

OUR FIRST CUSTOMERS
TWO VERIFICATION TRACKS

01

FIRST CUSTOMER

Academic partner, repeat buyer

2

COURSES AUTHORED

For the academic partner

15K

PER UNIT

Full unit now being authored

TWO TRACKS // BOTH VERIFICATION

TRACK 1 // HIRING // IN PROGRESS

BARCELONA VALIDATION PARTNER

+

UNCERTAIN SYSTEMS // HARD SKILLS

Hard-skill verification from proof of work, in their portfolio.

TRACK 2 // EDUCATION + CERTIFICATION
Academic partner, repeat buyer

BOTH TRACKS VERIFY SKILL FROM THE PROOF OF WORK.

REPEAT BUYER: FROM 2 COURSES TO A FULL UNIT.

06 // GO-TO-MARKET

REACH EXPERTS THROUGH COMMUNITIES

WHY COMMUNITIES // BUILT FOR VERIFICATION

EXPERT WORK SETS THE REFERENCE REGIONS.

Frontier experts are scarce and already have a job. They won't take low-prestige, low-paid AI tutor or data-collection gigs.

So we reach them through communities they already belong to and care about.

COMMUNITIES -> PROGRAMMES -> COMPANIES // VERIFICATION AT EVERY STAGE

NOW // STAGE 1

COMMUNITIES

Expert communities in frontier-tech and STEM fields solve real problems. Their work builds the regions we verify against.

NEXT // STAGE 2

PROGRAMMES

Universities, academies and certification programmes verify students' proof of work.

THEN // STAGE 3

COMPANIES

Frontier-tech, deep-tech and STEM employers verify skill in hiring.

COMMUNITIES FIRST. THEN PROGRAMMES. THEN COMPANIES.
